

How to Make a Thanksgiving Robotic Hand

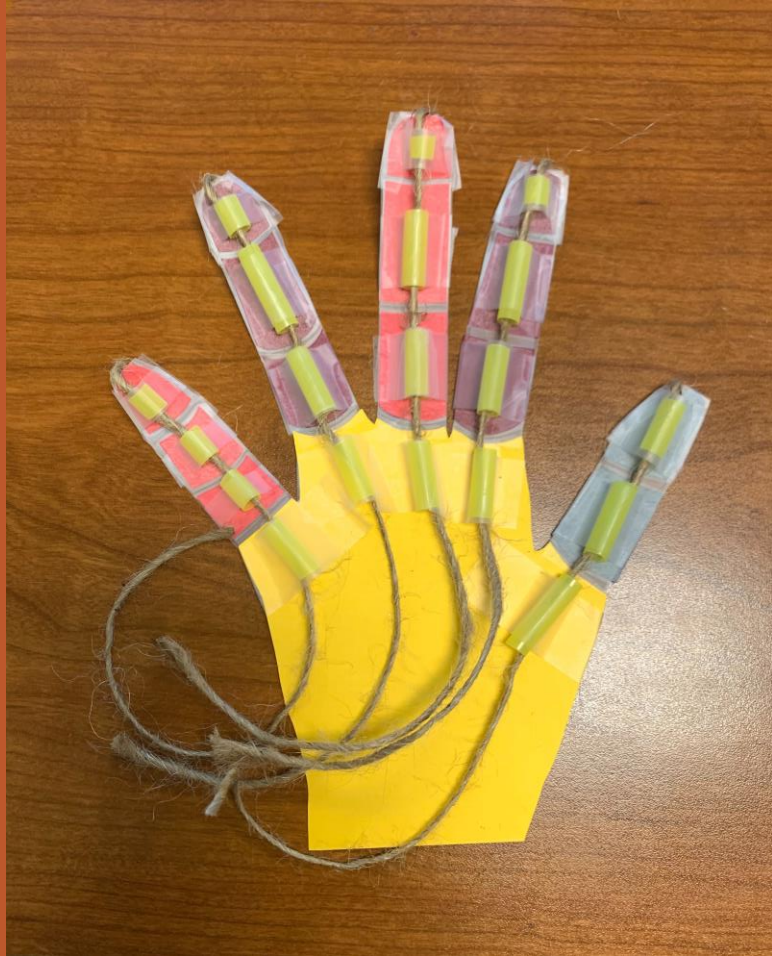

Trace your hand and cut it out. Mark where your knuckles are located, and cut along these spots.

Tape everything back together, leaving a space between the finger digits.

Cut small straw pieces and tape them to each digit.

Using ribbon or twine, lace a piece of string through the straw pieces of each finger. Secure the end of the string at the top of the finger with a knot or tape.

Decorate your turkey and pull the strings to move the feathers!
