

MAGNETIC SLIME RECIPE

1. **MIX** 1/4 cup of liquid starch with 2 tablespoons of iron oxide powder.
2. **COMBINE** with 1/4 cup of white glue.
3. **STIR!**
4. **SQUISH** the slime in your hands and use a paper towel to remove any extra liquid.
5. **WASH** your hands.
6. **MOVE** a strong magnet over the slime and observe what happens!

WHAT'S GOING ON?

Iron oxide is *ferromagnetic*, meaning it's attracted to magnets. The slime moves towards the magnet because the iron oxide in the slime is attracted to the magnet.
